

Retrospective for First Sprint

What went well:

- The division of tasks was effectively done as significant progress was made on the front-end as well as the back-end
- Decision made to focus on building blocks, giving us a strong foundation for further implementations
- Demo presentation was overall well received by Nedap representative
- Goals for this sprint were achieved

Improvements

- Scrum was not completely followed as we opted for a building blocks approach rather looking at priorities
- Prepare a presentation for the ease of the other groups during the second sprint review
- More focus on the functionality of the product

Goals for next Sprint:

- Use presentation along with a demo to clearly outline all user stories which were focused on and to easily display the tasks which were completed during the sprint
- Displaying Data
- Responsiveness of the front end
